Evaluation

Related Work

Outlook

Summary

## Conclusion

- ▶ Computational Linguistics (CL) deals with the formal and computational modeling of human language.
  - ▶ This includes (but is not limited to) the development of tools for the automatic analysis of language.  
→ Natural Language Processing (NLP)
- ▶ Where does language play a role in Education?
  - ▶ language is the most common medium of instruction, source of information, and basis of student assessment
  - ▶ in a (Second) Language Learning context, it also is the subject of learning
- ▶ Points of contact between CL and Language Learning: research questions and NLP applications based on
  - I. analysis of *learner language*
  - II. analysis of (*native*) language for learners

Evaluation

Related Work

Outlook

Summary

## Conclusion

- ▶ SLA research is aimed at understanding how second languages are acquired (and how language works)
  - ▶ empirical basis: analysis of learner data, . . .
- ▶ SLA research also studies *instructional interventions*
  - ▶ targeting different aspects of language,
  - ▶ in different types of tasks,
  - ▶ supporting different kinds of feedback, and
  - ▶ different sequencing of material
- ▶ interventions are tied to SLA theories and concepts, e.g.:
  - ▶ “monitor model” and “input hypothesis” (Krashen 1982)
  - ▶ “Zones of Proximal Development” (Vygotsky 1986)
  - ▶ “teachability” (Pienemann 1998)

Evaluation

Related Work

Outlook

Summary

## Conclusion

- ▶ adapts, advances, and tests effectiveness of intervention methods in teaching practice
- ▶ current FLTL typically is focused on the communicative abilities of the student
- ▶ analysis of learner language helps advance our understanding of student abilities and needs

- ▶ generally focused on developing test items which are predictive for the constructs to be tested
  - ▶ i.e., limited interest in the linguistic modeling needed to predict and understand why certain items work
- ▶ Language testing theorists (Bachman, Palmer, etc.) have significantly enriched the models of language competence and language tasks (ignored in linguistics).
- ▶ analysis of learner language in tasks aimed at supporting valid inferences about the learner's knowledge

Related Work

Outlook

Summary

## Conclusion

# CL and the analysis of learner language

- ▶ *Learner corpora*: analysis of learner language
  - ▶ to provide empirical evidence for SLA research (e.g., linguistic correlates of CEFR proficiency levels in MERLIN)
  - ▶ to provide insights into typical student needs in FLT

CL helps represent & annotate data, to make it searchable

- ▶ *Intelligent Tutoring Systems*: analysis of learner language *aimed at supporting language acquisition*
  - ▶ provide immediate, individualized feedback, e.g.:
    - ▶ meta-linguistic feedback in a form-focused activity
    - ▶ incidental focus-on-form in a meaning-based activity
    - ▶ feedback on meaning (very rare in ITS)
  - ▶ determine progression through pedagogical material
- ▶ *Testing*: automate *assessment of learner abilities*
- ▶ *Writer's aid tools*: feedback *aimed at producing text*

## Conclusion

## II. Analyzing language for learners

- ▶ *Searching for appropriate materials for learners*
  - ▶ materials on a particular topic
  - ▶ appropriate in readability, language forms to be learned
- ▶ *Generation of exercises and tests*
- ▶ *Enhanced presentation of materials*
  - ▶ texts with annotated vocabulary
  - ▶ visual input enhancement
- ▶ CL research and applications starts to target these, e.g.:
  - ▶ Language-Aware Search Engine (Ott & Meurers 2010)
  - ▶ Generation of exercises and visual input enhancement based on authentic materials

## Conclusion

## I. Individualized feedback in Intelligent Tutoring Systems

TAGARELA: An intelligent, web-based workbook in support of ab-initio learning of Portuguese

(Amaral & Meurers 2008, 2009, 2011; Amaral, Meurers & Ziai 2011)

## II. Enhancing authentic web pages for language learners

- ▶ Visual Input Enhancement of the Web (VIEW)
- ▶ Working with English Real-life Texts (WERTi)  
(Meurers et al. 2010)

# Computers in Language Teaching and Learning

## Introduction

- ▶ Computers widely used in foreign language teaching to help learners experience a foreign language & culture.
  - ▶ multimedia presentations, web-based TV/radio/news, email/chat with native speakers, . . .
- ▶ Apart from the undisputed role of such contextualized, communicative language use, which other aspects of language learning are relevant in this context?
- ▶ Research since the 90s has shown that **awareness of language forms and rules** is important for an adult learner to successfully acquire a foreign language.
  - ▶ (cf., e.g., Long 1991, 1996; Ellis 1994; Schmidt 1995; Lyster 1998; Lightbown & Spada 1999; Norris & Ortega 2000)

Outlook  
Summary

### Conclusion

- ▶ The time a student can spend with an instructor/tutor typically is very limited.
- ▶ In consequence, work on form and grammar is often deemphasized, confined to homework so that the time with the instructor can be used for communicative activities.
- ▶ The downside is that the learner has relatively few opportunities to gain awareness of forms and rules and receive individual feedback on errors.

## Conclusion

# Real-life teaching needs

## OSU practice confirming dilemma

A series of interviews with Spanish/Portuguese language instructors (cf., Amaral & Meurers 2005) finds that

- ▶ it can be difficult to achieve the communicative goal of an activity when students have problems using the appropriate language forms and sentence patterns.
- ▶ But class activities that focus on form or grammar patterns are perceived as problematic since
  - ▶ they reduce the pace of a lesson, and
  - ▶ individual differences make it impossible to have all students do the same tasks in exactly the same time.
- ▶ While instructors were sceptical of CALL tools aimed at replacing human interaction, they support tools that
  - ▶ practice receptive skills and reinforce acquisition of forms
  - ▶ raise linguistic awareness in general

Outlook

Summary

### Conclusion

# An opportunity for CALL

- ▶ The situation seems like an excellent opportunity for developing CALL tools to
  - ▶ provide individual feedback on learner errors and
  - ▶ foster learner awareness of relevant language categories.
- ▶ But existing CALL systems which offer exercises
  - ▶ typically are limited to uncontextualized multiple choice, point-and-click, or simple form filling, and
  - ▶ feedback usually is limited to yes/no or letter-by-letter matching of the string with a pre-stored answer.
    - ▶ Example: “Spanish Grammar Exercises” (B. K. Nelson)

Evaluation

Related Work

Outlook

Summary

## Conclusion

# Making CALL tools aware of language: NLP

- ▶ String matching is the most common technique used in CALL to analyze student input. This works well when
    - ▶ correct answers & potential errors are predictable & listable
    - ▶ there is little grammatical variation
    - ▶ envisaged errors correspond directly to intended feedback
  - ▶ But what if
    - ▶ possible correct answers are predictable but not (conveniently) listable for a given activity
    - ▶ errors can occur throughout a recursively built structure
    - ▶ individualized feedback is desired which requires linguistic analysis of the learner production
- ⇒ Use NLP to analyze student input in such cases!

Evaluation

Related Work

Outlook

Summary

## Conclusion

- ▶ A range of potentially relevant aspects of linguistic analysis
  - ▶ tokenization: identify words
  - ▶ morphological analysis: identify/interpret morphemes
  - ▶ syntactic analysis: identify selection, government and agreement relations and word order requirements
  - ▶ formal pragmatic analysis: identify coreference relations, information structure partitioning, ...
- ▶ One can integrate NLP identifying such properties to obtain language-aware, “Intelligent” CALL (ICALL).
- ▶ What can the NLP analysis be integrated in?
  - ⇒ An Intelligent Tutoring System

Outlook

Summary

## Conclusion

- ▶ An Intelligent Tutoring System (ITS) is a computer program that intelligently interacts with the learner. It
  - ▶ accurately diagnoses the knowledge/skills of a student,
  - ▶ adapts instruction accordingly, and
  - ▶ provide personalized feedback.
- ▶ Since Hartley & Sleeman (1973) an ITS is recognized as consisting of at least three components:
  - ▶ the expert model
  - ▶ the student model
  - ▶ the instruction model

Evaluation

Related Work

Outlook

Summary

## Conclusion

- ▶ Expert Model:
  - ▶ the knowledge that the ITS has of its subject domain, in our case the linguistic knowledge
- ▶ Student Model (= Learner Model)
  - ▶ the component of the system keeping track of the student's current state of knowledge
  - ▶ allows the ITS to infer student's understanding of subject matter and to adjust feedback to student's needs
- ▶ Instruction Model:
  - ▶ the component that stores pedagogical information, how to conduct instruction
  - ▶ It helps define strategies to deliver appropriate feedback.

- Related Work
- Outlook
- Summary

## Conclusion

- ▶ What role does the system play in teaching?
  - Self-guided activities accompanying teaching
- ▶ What type of activities are appropriate and useful for fostering awareness (and fit into the FLT approach)?
  - Activities ideally involve both form and meaning, such as listening/reading comprehension questions.
    - ▶ TAGARELA offers six types of activities:
      - ▶ listening comprehension
      - ▶ reading comprehension
      - ▶ picture description
      - ▶ fill-in-the-blank
      - ▶ rephrasing
      - ▶ vocabulary

Similar to traditional workbook exercises, plus audio.
- ▶ What should the system interfaces look like?
  - Use L2 as far as possible (needs careful interface design).

### Regiões do Brasil

O Brasil está política e geograficamente dividido em cinco regiões. Os limites de cada região (Norte, Nordeste, Sudeste, Sul e Centro-Oeste) coincidem sempre com as fronteiras dos estados que as compõem.

A região Norte ocupa a maior parte do território brasileiro, com uma área que corresponde a 45,27% da área total do País. Formada por sete Estados, tem sua área quase totalmente dominada pela bacia do Rio Amazonas.

A região Nordeste pode ser considerada a mais heterogênea do País. Dividida em quatro grandes zonas - meio-norte, zona da mata, agreste e sertão -, ocupa 18,26% do território nacional e tem nove estados.

O Sudeste é formado por quatro Estados. Esta é a região de maior importância econômica do País, onde está concentrado também o maior índice populacional - 42,63% dos brasileiros.

Já o Sul, região mais fria do País, com ocorrências de geadas e neve, é a que apresenta menor área, ocupando 6,75% do território brasileiro e com apenas três Estados. Os rios que cortam sua área formam a bacia do Paraná em quase toda sua totalidade e são de grande importância para o País, principalmente pelo seu potencial hidrelétrico.

Finalmente, a região Centro-Oeste tem sua área dominada basicamente pelo Planalto Central Brasileiro e pode ser dividida em três porções: maciço goiano-mato-grossense, bacia de sedimentação do Paraná e as depressões. Ela é formada por quatro Estados e nela está a capital do Brasil.

Summary

## Conclusion

- ▶ NLP can be used in ICALL tools to
  - ▶ foster learner awareness of language forms & categories
  - ▶ provide individual feedback on learner errors
- ▶ 30 years of ICALL research (cf. Heift & Schulze 2007), but
  - ▶ very few ICALL systems used in FLT practice today (Heift 2010; Nagata 2010; Amaral & Meurers 2011)
- ▶ Problems to be overcome:
  - ▶ lack of interdisciplinary research combining computational, linguistic, SLA & education expertise
  - ▶ ICALL projects generally are not designed to address real-life needs, typically never tested with real users.

# Analyzing language for learners

## Introduction

- ▶ NLP in language learning has primarily centered on analyzing learner language in Tutoring Systems.
- ▶ How about using NLP of authentic native language in support of language learning?
- ▶ Where does SLA research identify a corresponding need?

Summary

### Conclusion

- ▶ Learners have to be exposed to linguistic features to acquire them and must **notice** them (Schmidt 1995).
  - ▶ There is no learning without noticing, but developing awareness requires input.
  - ▶ Strategies highlighting the salience of language forms and categories are referred to as *input enhancement* (Sharwood Smith 1993).
- ⇒ Let's use NLP to provide automatic input enhancement for language learners: WERTi (Meurers et al. 2010)

Outlook

Summary

## Conclusion

- ▶ Provide learners of English (ESL) with input enhancement for any web pages they are interested in.
- ▶ good for learner motivation:
  - ▶ learners can choose material based on their interests
  - ▶ includes news, up-to-date information, hip stuff
  - ▶ pages remain fully contextualized (video, audio, links)
- ▶ wide range of potential learning contexts:
  - ▶ can supplement *regular classroom instruction*
  - ▶ can support voluntary, self-motivated pursuit of knowledge
    - *lifelong learning*
  - ▶ can foster *implicit learning*, e.g., for adult immigrants:
    - ▶ already functionally living in second language environment, but stagnating in acquisition
    - ▶ without access/motivation to engage in explicit learning, but browsing the web for information and entertainment

## Conclusion

# What language properties should we enhance?

- ▶ A wide range of linguistic features can be relevant for *awareness*, incl. morphological, syntactic, semantic, and pragmatic information (cf. Schmidt 1995, p. 30).
- ▶ We focus on enhancing language patterns which are well-established difficulties for ESL learners:
  - ▶ determiner and preposition usage
  - ▶ use of gerunds vs. *to*-infinitives
  - ▶ *wh*-question formation
  - ▶ phrasal verbs

NLP identifying other patterns can easily be integrated as part of a flexible architecture.

## Conclusion

# How should the targeted forms be enhanced?

- ▶ WERTi currently offers three types of input enhancement:
  - a) color *highlighting* of the pattern or selected parts thereof
  - b) pages supporting *clicking*, with automatic color feedback
    - ▶ automatic feedback compares automatic annotation of clicked on form with targeted form
  - c) pages supporting practice (e.g., *fill-in-the-blank*), with automatic color feedback
    - ▶ automatic feedback compares form entered by learner with form in original text
- ▶ This follows standard pedagogical practice (“PPP”):
  - a) receptive presentation
  - b) presentation supporting limited interaction
  - c) controlled practice
  - d) (free production)

## Car-free cities: an idea with legs

Car-free neighbourhoods are no unrealistic utopia – they exist all over Europe

'Not anti-car, just pro-choice' ... a cyclist in Vauban, Germany. Photograph: Sipa Press/Rex Features

A quarter of households in Britain – more in the larger cities, and a majority in some inner cities – live without a car. Imagine how quality of life would improve for cyclists and everyone else if traffic were removed from areas where people could practically choose to live without cars. Does this sound unrealistic, utopian? Did you know many European cities are already doing it?

## Why do people use illegal drugs?

[change]

Most illegal drugs cause people to become intoxicated<sup>[needs proving]</sup>. The slang term for this experience is "getting stoned" or "getting high." When a drug user is intoxicated, they may feel strange, happy, dizzy, or weird. Some drugs such as **marijuana** and **hashish** often make users feel sleepy and relaxed. Some drug users have feelings that they are floating or dreaming. Drugs such as LSD make people feel intensely; they make one see and feel things like never before, and think things about the world they would normally not. Some say it increases knowledge and creates wisdom. Other drugs such as **Crystal Meth** make users feel excited and happy and full of energy.

# Realizing WERTi/VIEW

- ▶ First WERTi prototype (Amaral/Meurers/Metcalf at CALICO 06, EUROCALL 06)
  - ▶ targets determiners, prepositions in Reuters news text
  - ▶ still available at <http://purl.org/icall/werti-v1>
- ▶ Second WERTi prototype (Dimitrov/Ott/Ziai)
  - ▶ flexibly support integration of a wider range of language patterns using heterogeneous set of NLP (using UIMA)
- ▶ Firefox Add-On (Boyd): <http://purl.org/icall/werti>
  - ▶ moves fetching of web page and text identification to client to better support sites requiring login, cookies, etc.
- ▶ Visual Input Enhancement of the Web (VIEW)
  - ▶ international version (English, German, Spanish)
  - ▶ Add-On available at: <http://purl.org/icall/view>

Outlook

Summary

## Conclusion

# Evaluating input enhancement techniques

- ▶ Improving learning outcomes is the overall goal of WERTi and visual input enhancement in general.
- ▶ While some studies show an improvement in learning outcomes, the study of visual input enhancement sorely needs more experimental studies (Lee & Huang 2008).
- ▶ WERTi can systematically produce visual input enhancement for a range of language properties
  - Supports real-life intervention studies studying language learning under a wide range of parameters.
  - Supports lab-based experiments to evaluate when input enhancement succeeds in making learners notice.
- ▶ Precision and recall of the NLP identifying the enhanced classes must also be tested (requires realistic test data).

Outlook

Summary

## Conclusion

- ▶ One can view automatic input enhancement as an enrichment of Data-Driven Learning (DDL).
  - ▶ DDL is an “attempt to cut out the middleman [the teacher] as far as possible and to give the learner direct access to the data” (Boulton 2009, p. 82, citing Tim Johns)
- ▶ WERTi: learner stays in control, but NLP uses ‘teacher knowledge’ about relevant language properties to make those more prominent to the learner.

## Reading Support Tools

- ▶ Glosser-RuG (Nerbonne et al. 1998): supports reading of French texts for Dutch learners
  - ▶ context-dependent dictionary, morphological analysis, and examples of word use in corpora
- ▶ COMPASS project (Breidt & Feldweg 1997): similar to Glosser-RUG, focusing on multi-word lexemes
- ▶ ALPHEIOS project (<http://alpheios.net>): supports lexicon lookup and provides aligned translations
- ▶ REAP project (<http://reap.cs.cmu.edu>) supports learners in searching for texts that are well-suited for providing vocabulary and reading practice (Heilman et al. 2008).

# Outlook: Questions to be addressed

- ▶ Which *language pattern types* should be input enhanced?
  - ▶ adverb placement, passive vs. active, . . .
  - ▶ tense and aspect
    - ▶ effect is semantic, but there are identifiable lexical cues (“usually go” vs. “are going tomorrow”)
- ▶ Which *aspect of the patterns* should be input enhanced?
  - ▶ lexical classes, morphemes
  - ▶ contextual clues (optional or obligatory)
- ▶ What is the *best input enhancement*, i.e., highlighting or interaction possibilities
  - ▶ for a particular linguistic pattern,
  - ▶ given a specific web page with its existing visual design features?

## Conclusion

# Input enhancement summary

- ▶ We motivated and discussed an approach providing automatic input enhancement of authentic web pages.
  - ▶ Automatic feedback for the practice activities is feasible since the original text is known.
  - ▶ Web pages can be selected by learners based on interests.
    - ▶ But how can we ensure sufficient representation of pattern to be enhanced?
    - ▶ And is the text at the right level of readability for the individual learner?
- Language Aware Search Engine  
(Ott & Meurers 2010; Vajjala & Meurers 2012)

## Conclusion

- ▶ NLP can be used to analyze
    - ▶ learner language or
    - ▶ language for learners.
  - ▶ In tutoring systems it can address real-life needs, providing
    - ▶ contextualized activities integrating meaning & form,
    - ▶ opportunities for students to practice their listening, reading, and writing skills
    - ▶ with individualized feedback to learner
  - ▶ It can support visual input enhancement fostering learner awareness of language categories.
- ⇒ Integration of computational, linguistic, FLT/SLA and education expertise opens up interesting opportunities.
